

# Instagram user analytics

## A) Marketing Analysis:

**Loyal User Reward:** The marketing team wants to reward the most loyal users, i.e., those who have been using the platform for the longest time.

**Your Task:** Identify the five oldest users on Instagram from the provided database.

## SQL QUERIES

```
SELECT * FROM users
order by created_at asc
limit 5;
```

## SQL OUTPUT

| Result Grid |      |                  |                     |
|-------------|------|------------------|---------------------|
|             | id   | username         | created_at          |
| ▶           | 80   | Darby_Herzog     | 2016-05-06 00:14:21 |
|             | 67   | Emilio_Bernier52 | 2016-05-06 13:04:30 |

| ✱           | NULL | NULL             | NULL                |

**2. Inactive User Engagement:** The team wants to encourage inactive users to start posting by sending them promotional emails.

**Your Task:** Identify users who have never posted a single photo on Instagram.

## SQL QUERIES

```
select * from users as a
left join photos as b on
a.id=b.user_id and
b.user_id is null
```

## SQL OUPUTPUT

**3. Contest Winner Declaration:** The team has organized a contest where the user with the most likes on a single photo wins.

**Your Task:** Determine the winner of the contest and provide their details to the team.

### SQL QUERIES:

```
SELECT
    photo_id
FROM
    likes
GROUP BY photo_id
ORDER BY COUNT(user_id) DESC
LIMIT 1;

with MostLikedPhoto as (SELECT
    photo_id, COUNT(user_id) as total_likes
FROM
    likes
GROUP BY photo_id
ORDER BY COUNT(user_id) DESC
LIMIT 1)
select u.username, u.id, p.id as photo_id, MostLikedPhoto.total_likes from MostLikedPhoto
join photos p on MostLikedPhoto.photo_id = p.id
join users u on p.user_id = u.id;
```

### SQL OUTPUT:

| Result Grid   Filter Rows:   Ex |               |    |          |             |
|---------------------------------|---------------|----|----------|-------------|
|                                 | username      | id | photo_id | total_likes |
| ▶                               | Zack_Kemmer93 | 52 | 145      | 48          |

**4. Hashtag Research:** A partner brand wants to know the most popular hashtags to use in their posts to reach the most people.

**Your Task:** Identify and suggest the top five most commonly used hashtags on the platform.

### SQL QUERIES:

```
select * from tags;  
with top_tags as  
(select tag_id from photo_tags  
group by tag_id  
order by count(tag_id) desc  
limit 5)  
select t.tag_name from top_tags  
join tags t on top_tags.tag_id = t.id;
```

### SQL OUTPUT:

| Result Grid |          | Filter Rows: | Export: | Wrap Cell Content: |
|-------------|----------|--------------|---------|--------------------|
|             | tag_name |              |         |                    |
| ▶           | smile    |              |         |                    |
|             | beach    |              |         |                    |
|             | party    |              |         |                    |
|             | fun      |              |         |                    |
|             | concert  |              |         |                    |

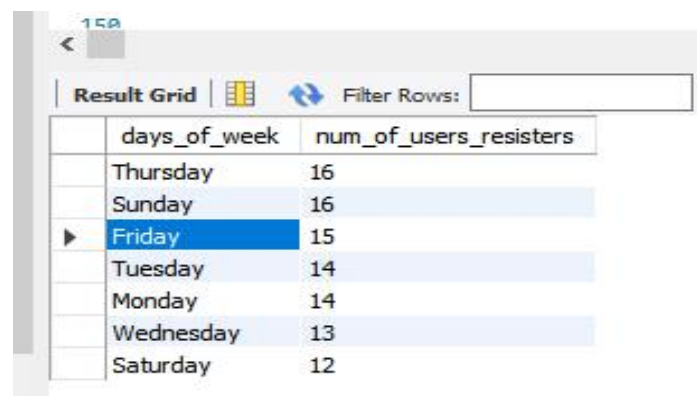

**5. Ad Campaign Launch:** The team wants to know the best day of the week to launch ads.

**Your Task:** Determine the day of the week when most users register on Instagram. Provide insights on when to schedule an ad campaign.

### SQL QUERIES:

```
select dayname(created_at) as days_of_week,  
       count(*) as num_of_users_resisters  
from users  
group by dayname(created_at)  
order by num_of_users_resisters desc;
```

### SQL OUTPUT:

The screenshot shows a SQL query result grid with two columns: 'days\_of\_week' and 'num\_of\_users\_resisters'. The results are ordered by the number of users in descending order. Friday is highlighted with a blue background.

| days_of_week | num_of_users_resisters |
|--------------|------------------------|
| Thursday     | 16                     |
| Sunday       | 16                     |
| Friday       | 15                     |
| Tuesday      | 14                     |
| Monday       | 14                     |
| Wednesday    | 13                     |
| Saturday     | 12                     |

## B) Investor Metrics:

1. **User Engagement:** Investors want to know if users are still active and posting on Instagram or if they are making fewer posts.

**Your Task:** Calculate the average number of posts per user on Instagram. Also, provide the total number of photos on Instagram divided by the total number of users.

## SQL QUERIES:

```
SELECT COUNT(DISTINCT id) AS total_users_on_instagram
FROM users;
```

```
SELECT COUNT(*) AS total_photos_on_instagram
FROM photos;
```

```
SELECT (SELECT Count(*)
        FROM   photos) / (SELECT Count(*)
                           FROM   users) AS avg;
```

## OUTPUT:

|   |   |  |  |         |   |                    |   |
|---|---|--|--|---------|---|--------------------|---|
| Result Grid   |  |  Filter Rows: |  | Export: |  | Wrap Cell Content: |  |
|   | total_users_on_instagram  |  |  |         |   |                    |   |
|  | 100   |  |  |         |   |                    |   |

---

|   |   |  |  |
|---|---|--|--|
| <   |  |  Filter Rows: |  |
|   | total_photos_on_instagram   |  |  |
|  | 257   |  |  |

| Result Grid |        |
|-------------|--------|
|             | avg    |
| ▶           | 2.5700 |

**average number of posts per user on Instagram:**

**post count by user**

**QUERIES:**

```
select user_id, count(*) as posts_count from photos
group by user_id
order by posts_count desc;
```

**OUTPUT:**

| Result Grid |              |
|-------------|--------------|
|             | Filter Rows: |
| user_id     | posts_count  |
| 15          | 4            |
| 87          | 4            |
| 4           | 3            |
| 10          | 3            |
| 50          | 3            |
| 67          | 3            |
| 17          | 3            |
| 42          | 3            |
| 92          | 3            |
| 96          | 3            |
| 99          | 3            |
| 38          | 2            |
| 100         | 2            |
| 82          | 2            |
| 84          | 2            |
| 85          | 2            |
| 60          | 2            |
| 62          | 2            |
| 19          | 2            |
| 93          | 2            |
| 95          | 2            |
| 30          | 2            |

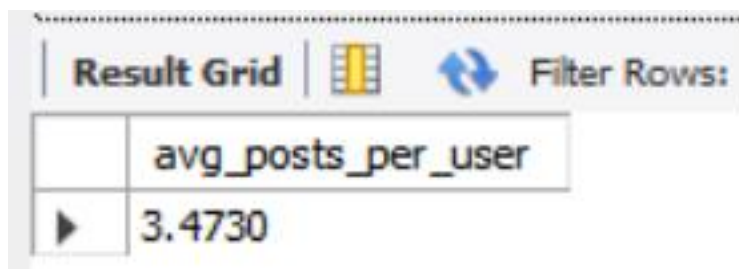

average\_post per user:

## QUERIES:

```
SELECT AVG(posts_count) as avg_posts_per_user
FROM (
  select user_id, count(*) as posts_count from photos
  group by user_id
  order by posts_count desc) as user_posts;
```

## OUTPUT:

The screenshot shows a database interface with a 'Result Grid' tab. The grid has two columns: 'avg\_posts\_per\_user' and a value '3.4730'. The value is preceded by a right-pointing triangle icon.

|   | avg_posts_per_user |
|---|--------------------|
| ▶ | 3.4730             |

**2. Bots & Fake Accounts:** Investors want to know if the platform is crowded with fake and dummy accounts.

**Your Task:** Identify users (potential bots) who have liked every single photo on the site, as this is not typically possible for a normal user.

## SQL QUERIES:

```
SELECT count(image_url)/count(a.id) as avg1 from users as a  
left join photos as b  
on a.id=b.user_id  
group by b.user_id
```

```
select count(id) from users
```

```
select count(image_url) from photos
```

## OUTPUT:

|   | avg1   |
|---|--------|
| ▶ | 1.0000 |
|   | 1.0000 |
|   | 1.0000 |
|   | 1.0000 |
|   | 0.0000 |
|   | 1.0000 |
|   | 1.0000 |

|   | count(id) |
|---|-----------|
| ▶ | 100       |

|   | count(image_url) |
|---|------------------|
| ▶ | 257              |
